BHARGAV BORGAONKAR

GAME DEVELOPER | GAMEPLAY PROGRAMMER | LEVEL DESIGN

bhargavborgaonkar@gmail.com | github.com/Bhargav140206 | linkedin.com/in/bhargav-borgaonkar-b75718220

PROFESSIONAL SUMMARY

BCA Game Development student with practical experience creating and testing 2D and 3D game prototypes in Unity. Focused on gameplay programming and level design, with an interest in building responsive player controls, clear gameplay interactions, and well-structured playable spaces. Familiar with C# scripting, Unity components and prefabs, physics-based interactions, UI integration, basic AI behaviour, debugging, and iterative testing. Uses Git and GitHub for version control and collaboration, and is expanding skills in Unreal Engine and C++. Looking to contribute to a game development team while continuing to improve technical skills and level-design practice.

INTERNSHIP EXPERIENCE

Internship Completed — Akiyam Solutions Pvt. Ltd.

Completed an internship with exposure to game development and technical project work. Contributed to practical development tasks and gained experience working with project requirements, scripts, testing, and iterative improvements.

Note: Specific responsibilities and outcomes were not listed in the original resume; add concrete examples here if you want this section to be more targeted.

TECHNICAL SKILLS

Gameplay Programming: Unity; C# fundamentals; MonoBehaviour-based scripting; variables, conditions, loops and methods; player movement and interaction; gameplay mechanics; debugging and testing.

Unity Development: GameObjects and components; prefabs; colliders and rigidbodies; UI integration; animation workflows; scene setup; basic optimization and iteration.

Level Design: Level layout and flow; pacing and progression; obstacle and encounter placement; player guidance; readability; challenge balancing; player feedback.

AI & Game Systems: NavMesh-based AI concepts; enemy patrol and chase behaviour; state-machine concepts; multiplayer lobby flow and match-stat tracking concepts.

Tools & Workflow: Git and GitHub; Blender; Unreal Engine (learning); Adobe Photoshop; Adobe Premiere Pro; testing and troubleshooting.

RELEVANT EXPERIENCE & TECHNICAL WORK

Gameplay Prototyping — Unity, C#

- Built and iterated on small 2D and 3D prototypes to practise core gameplay loops, player movement, obstacle interactions, timing, collision behaviour, and feedback.
- Worked with Unity components, prefabs, physics interactions, UI elements, and gameplay scripts to connect player input with in-game responses.
- Used debugging and repeated playtesting to identify issues, check behaviour, and refine gameplay interactions.

Level Design Focus

- Interested in planning compact, readable levels with a clear route, meaningful obstacles, and a steady progression of challenge.
- Focuses on player navigation, pacing, encounter placement, spatial layout, and using environmental cues to help players understand where to go.
- Can support a blockout-first workflow by testing level scale, routes, sightlines, and gameplay flow before final art and assets are added.

EDUCATION

Bachelor of Computer Applications (BCA) — Game Development

ADDITIONAL INFORMATION

Areas of focus: Gameplay programming, Unity development, level design, prototyping, debugging, and iterative testing.
Further learning: Unreal Engine and C++.
